

WEB-014: Metro: Last Departure - Animated Gaming Landing Page

Category: Web Development

Context

This landing page is for "Metro: Last Departure," a single-player survival-exploration game set on a metro line during a zombie outbreak. The page is for the company's online gaming platform and will serve as the primary marketing/pre-launch page: driving wishlist signups and showing off the game's identity before launch. This is a static front-end build only; no backend, login, or live data is required. "Online" refers to the game being browser-accessible/downloadable via the platform, not multiplayer. Platform target: responsive web (desktop + mobile), deployed as a static site.

Project Information

Field	Details
Project ID	WEB-014
Category	Web Development
Project Type	Animated single-page game landing page
Client / Brand	Metro: Last Departure (Online Gaming Platform)
Platform / Medium	Static website, responsive (desktop + mobile)
Deliverable Type	HTML + CSS + JS source files
Primary Goal	Build an animated, interactive landing page for a single-player metro survival game.

Main Goal

Build a single-page animated landing page for "Metro: Last Departure" containing all 8 sections below, in this exact order, with the specified animations and interactions:

1. Hero
 2. Gameplay Features
 3. Interactive Metro Map
 4. Survivor Roster (Unlockable Character Classes)
 5. Story Teaser (Intercepted Transmission)
 6. Survival Mechanics
 7. Endings Preview
 8. CTA Footer
-

About Metro: Last Departure

"Metro: Last Departure" is a single-player survival-exploration game. A normal metro commute turns into a zombie outbreak survival scenario after an experimental gas leak from a sealed research lab tunnel contaminates the line. The metro system's AI rerouted the player's train into the contamination zone: the player must survive, earn points, unlock character classes, and reach the surface before final lockdown.

Brand tone: Tense, clinical, ominous like a transit system slowly malfunctioning.

Tagline: Can You Reach The Last Departure?

Requirements

The freelancer will build a fully responsive, animated single-page website matching the dark "metro/infection" aesthetic.

Core Sections & Animations

1. **Hero**
 - Glitch-effect title animation ("METRO: LAST DEPARTURE") periodic RGB-split/clip glitch, not constant
 - Animated background: subtle moving tunnel-line pattern, ambient gradient glows
 - Status bar showing "containment breach" status with a pulsing indicator dot
 - A routine metro journey becomes a fight for survival after a mysterious outbreak contaminates the transit network.
 - Pulsing primary CTA button ("Board The Train")
 - Scroll cue with animated indicator
2. **Gameplay Features**
 - 4-card grid: Explore The Metro Network, Survive The Outbreak, Solve Environmental Puzzles, Uncover The Conspiracy
 - Hover state: left accent bar reveal + card lift animation

3. Interactive Metro Map

- SVG-based line map with 4 stations: Central Station -> Research Lab -> Underground Tunnels -> Final Departure Terminal
- Animated "active flow" line (dashed line animation along the route)
- Hover/focus on each station glows the node and reveals a tooltip with station-specific lore/status text
- Two stations marked "danger" (red glow on hover), two neutral (green glow on hover)
- Must be keyboard-accessible (tab to focus stations, tooltip appears on focus)

4. Survivor Roster (Unlockable Character Classes)

- 4 flip-cards: Engineer, Medic, Security Guard, Hacker
- Front face: class name, class number, points-to-unlock
- Back face (revealed on hover/focus): ability description
- These are unlockable classes the single player progresses through/switches between not separate multiplayer roles
- 3D flip animation (Y-axis rotation)

5. Story Teaser

- Terminal/log-style text block with sequential scroll-triggered text reveal (each line fades in with delay)
- Color-coded log lines: normal (green), warning (red), system (dim gray)
- Blinking cursor at end of final line

6. Survival Mechanics

- 4-item grid/list showcasing core systems: ❤️ Health System, 🦠 Infection Detection, 🔑 Resource Collection, 🚇 Metro Exploration
- Each item: icon, short title, 1-2 line description
- Subtle hover/reveal animation per item

7. Endings Preview

- 4-tile grid, one per ending: Escape Ending, Sacrifice Ending, Conspiracy Ending, Bad Ending
- Ending titles are blurred by default, sharpen on hover (no spoiler text visible until interaction)

8. CTA Footer

- "Can You Reach The Last Departure?" as large heading
- Single primary CTA: "Play Now" (pulsing)

General Animation Requirements

- All major sections use scroll-triggered reveal (fade + slight upward translate) on first viewport entry
 - Hover/focus micro-interactions on all interactive elements (cards, stations, buttons)
 - Respect **prefers-reduced-motion** all animations must be disabled/reduced for users with this setting
 - No animation should block readability or cause layout shift
-

Visual & Technical Specs

Color Palette

Purpose	Color name	Hex
Background	Near-black	#0A0C0D
Panel background	Dark gray	#111416
Borders / dividers	Line gray	#1D2226
Text primary	Off-white	#D8E0DE
Text dim/secondary	Muted gray-green	#6F7A78
Accent (signal)	Signal green	#39FF8F
Accent (hazard)	Hazard red	#FF3B3B
Accent (amber)	Amber	#FFB238

Color rules:

1. No purple, blue, or pink accents palette is restricted to green/red/amber against near-black.
2. Glows/shadows are permitted (required for signature hover effects) but should remain subtle, not oversaturated.
3. No light/white backgrounds anywhere on the page.

Typography

Usage	Font	Notes
Headings/Display	Arial Narrow (or equivalent condensed sans), weight 900	Uppercase, tight letter-spacing
Body	Courier New / monospace	Used throughout for a "system terminal" feel
Eyebrows/Labels	Same monospace, smaller size, wide letter-spacing (3-5px), uppercase	

Not allowed: decorative/script fonts, rounded friendly sans-serifs, default system sans (e.g., plain Helvetica/Arial for headings).

Technical Requirements

- **Stack:** Vanilla HTML/CSS/JS, OR React + Tailwind if freelancer prefers
- **Responsive:** Must work down to 320px width; the metro map and feature grids should reflow to single-column on mobile
- **Browser support:** Latest Chrome, Edge, Firefox, Safari
- **Performance:** No external heavy libraries; SVG/CSS animations preferred over JS-heavy animation libraries
- **Code quality:** Clean, commented, single-purpose files

Allowed Tech Stack

1. Vanilla HTML/CSS/JS
2. React + Tailwind CSS
3. Any free, open-source animation library (e.g., GSAP free tier, AOS) if it improves on the spec: must be justified, not required

Not Allowed

- Paid plugins or premium UI kits
- Backend/server/database
- Authentication, user accounts, or any multiplayer/community features (leaderboards, live player counts, rankings)
- Stock photography (illustration/SVG/typography-driven design only)

Reference Materials

Asset	File / URL
Reference visual direction	- Dark metro/infection UI: neon green/red/amber on near-black, glitch + terminal-log aesthetic

How to use these references: Match the section order, color palette, typography, copy tone, and animation behaviors described above. Copy text may be lightly edited for clarity but tone (clinical/ominous/transit-system) must be preserved.

Deliverables

no.	Item	Format	Notes

1	Landing page source	<code>.html</code> , <code>.css</code> , <code>.js</code> (or <code>.jsx</code> + Tailwind config if React)	Fully functional, all 8 sections
2	Mobile-responsive build	Same files	Tested down to 320px
3	README.md	<code>.md</code>	Setup instructions, how to preview locally

File Naming Convention

`[PREFIX]_[item-name]_[version]_[YYYY-MM-DD].[ext]`

Example: `METRO_landing-page_v1_2026-06-14.html`

Rules:

- kebab-case for all filenames
- No spaces
- No alternate naming structures

Folder Structure

```
MetroLastDeparture_Landing/
  index.html
  styles.css (if separated from HTML)
  script.js (if separated from HTML)
  README.md
```

Scope Boundaries

DO

- Build the complete 8-section single-page layout with all specified animations
- Match the dark metro/infection visual identity exactly
- Make the metro map and character cards fully interactive and keyboard-accessible
- Use placeholder/system-generated copy where needed, in the established tone

DO NOT

- Add additional sections beyond the 8 specified
- Change section order
- Introduce a different color palette or font system
- Add multiplayer, leaderboard, live player count, or any community/social features
- Build any backend, login, or database

- Use stock photography or AI-generated character art (icons/emoji/SVG only for this milestone)
-

Quality Control / Pre-Submission Checklist

1. All 8 sections present, in correct order
 2. Glitch hero animation works and loops correctly
 3. Metro map stations are hoverable AND keyboard-focusable, with tooltips appearing correctly
 4. Character class cards flip on hover/focus, showing correct ability text on back face
 5. Story teaser text reveals sequentially on scroll, not all at once
 6. Survival Mechanics section displays all 4 systems with icons and descriptions
 7. Endings tiles are blurred by default and sharpen on hover
 8. `prefers-reduced-motion` disables/reduces all animations
 9. Fully responsive at 320px, 768px, 1440px widths
 10. No console errors
-

Acceptance Checklist

1. Page visually matches the dark metro/infection identity (palette, typography, section order)
 2. All animations specified above are implemented and function smoothly (no jank/layout shift)
 3. Metro map and character class cards are accessible via keyboard navigation
 4. Page is fully responsive across mobile, tablet, desktop
 5. Code is clean, commented, and organized per folder structure
 6. No multiplayer/community elements present anywhere on the page
-

Evaluation Criteria

- Visual fidelity to the dark metro/infection identity
 - Smoothness and correctness of all specified animations
 - Responsiveness across breakpoints
 - Accessibility (keyboard navigation, reduced-motion support)
 - Code organization and readability
 - Single-player framing consistency (no multiplayer/community language or elements)
-

Designer's / Developer's Choices

Decision	Accepted Options
Stack	Vanilla HTML/CSS/JS, or React + Tailwind
Animation library use	None (CSS/SVG only), or free library (GSAP free tier, AOS) if it improves polish
File separation	Single index.html, or split into HTML/CSS/JS files

Delivery Terms

- **Revisions included:** 1 round of minor revisions (animation timing, spacing, color tweaks)
 - **Allowed revision types:** animation timing adjustments, spacing/sizing fixes, minor copy edits, color shade adjustments within the approved palette
 - **What does not count as a revision:** adding/removing sections, changing the color palette, switching tech stack after delivery
 - **Delivery method:** ZIP file or GitHub repo link
-

Final Goal

The finished landing page should immediately feel like the front door to a tense, atmospheric single-player survival game system-glitch-driven, interactive, and exploration-focused. A visitor should leave understanding the core premise (rerouted train, outbreak, conspiracy), what character classes they can unlock and play as, what survival systems they'll manage, and that multiple endings await depending on their choices and feel pulled toward clicking "Play Now."
